BIM APPLICATIONS SPECIFICATION SERVICES ON CLOUD-BASED CONTRACT FURNITURE

Toronto, ON May 23, 2018 – BiSemA announced today that it finished production of their cloud-based contract furniture specification, that allows for space layouts in AutoCAD and Revit. BiSemA also is in the final stages of developing its services for SketchUp and pCon CAD applications.

The architecture, engineering and construction industries are shifting to BIM (Building Information Modeling) applications and have standardized the use of Revit. Worldwide, Revit, and SketchUp, have become common and popular BIM software tools.

“BiSemA’s cloud contract furniture specification service allows users to create space layouts on AutoCAD, as well as Revit. SketchUp and pCon will be added by September 2018.” said Semegne Tafesse, founder and CEO of BiSemA Corporation.

“Currently, creating a space layout on Revit or SketchUp requires a significant number of manual steps, and is inflexible, as it is difficult for the user to update the space layout after its’ creation.” Added Tafesse.

BiSemA Corporation will present all its new cloud specification and collaborative services at NeoCon – 2018, booth #7-2136 in Chicago. BiSemA’s presentation schedule is available at www.bisema.com
