

Safco®–Mayline® Helps You Stand Out from the Crowd with the Brio™ Desk

Minneapolis (May, 2018): Safco®–Mayline® is excited to feature the Brio™ Desk this year at NeoCon.

The Brio Desk provides a convenient, upright workstation that can be used in personal work areas or touchdown spaces. This versatile desk features raised wheels at the back and a tip-and-pull handle under the tabletop so it can be easily moved if needed. The small footprint and mobility makes Brio ideal for small work areas and an aesthetically pleasing design creates a great option for meeting or gathering spaces to help maintain a professional atmosphere.

Brio is a standing-height desk that makes it easy to stay active throughout the workday. It is height-adjustable to suit a broad range of user heights comfortably. The tabletop slants downward three degrees, making it easier to use while standing for a movement-rich day.

Brio's base features a built-in, ergonomic foot ramp that may help to take pressure off the legs and help promote healthy circulation. If paired with a leaning or perch chair, the footrest provides a stable way to change positions throughout the day for added movement.

The Brio Desk is one of several products with the Active Collection that Safco–Mayline will be featuring. Find Brio and more active options in our showroom, 1147.

About Safco® – Mayline®

With 125 years of industry knowledge, Safco®–Mayline® offers an array of furniture solutions to create top-notch spaces everyone will be talking about. We deliver a memorable experience because we truly care about how and where people work. To create work spaces that energize and inspire people, we use market knowledge and employee know-how to spread workspace product innovation. We maintain a culture of spirited professionalism to ensure that everyone receives a positive, memorable experience - customer and employee alike.

This product is part of the Active Collection line; The Active Collection products are designed to promote active movement throughout the day and engage major muscle groups to help combat the negative effects of inactivity in many workplace settings.
