FLOOR ILLUMINATION MADE EASY

Looking for an easy way to create directional paths or callouts on the floor for your next event or display, but struggling with the build out of a bulky, limiting LED system? Tetragon Architects called on Light Tape® to fill their needs for the "Unearthed" exhibition, showcasing the metro expansion work in Piraeus, Greece. Using 6" Natural Blue Light Tape® electroluminescent lamps, they were able to bring their design to light.

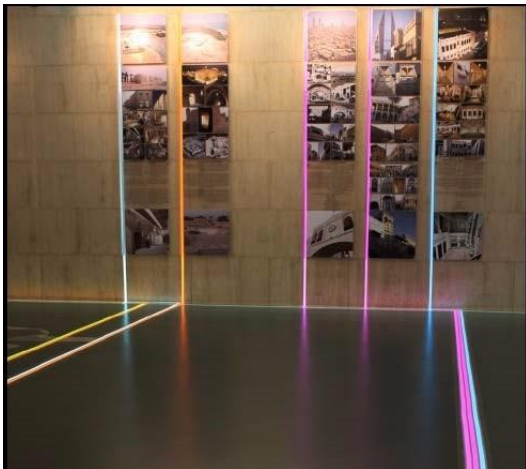

CUSTOMIZABLE

Need to create a shape or design with Light Tape®? Just apply the Light Tape to the floor, then mask out areas that you don't want to illuminate. It really is that easy.

FLAT AND DURABLE

Temporary installations are a breeze. Just tack in place with a bit of double sided adhesive, then cover with our Durashield overlay adhesive or a floor graphic. Consider labor costs eliminated!

GO THE DISTANCE

Light Tape® is available in continuous runs up to 150' on a single connection. No other light source in the world can do that. Literally.
