Falcon Features New Power Solutions, Maker Tables, Booth Seating and More at NeoCon 2017

Newport, Tenn., June 9, 2017 – Falcon will launch a range of products at NeoCon, taking place June 12-14, 2017, at The Mart in Chicago. Visitors to showroom 11-111 will see an array of seating, tables, acoustic panels and more designed to enhance workspaces and common areas, support collaboration, and improve efficiencies in corporate, education, and healthcare environments.

Falcon Low Voltage Power and Lighting Solution, a state-of-the-art, fully integrated low voltage power and LED lighting system, is among the new featured products. Falcon Low Voltage Power and Lighting Solution is a class 2 low voltage system that offers wireless control and is safe, easy and cost-efficient to install as it does not require a licensed electrician. The new system is highly energy efficient, modular and adaptable.

Powered by Nextek Power Systems technology, Falcon Low Voltage Power and Lighting Solution will be shown at NeoCon in conjunction with Falcon's Acoustic Panels to create a solution that delivers wireless lighting control and strong sound absorption. Ambient or task light is created through the integration of Falcon Low Voltage Power and Lighting Solution into the panels. General room or directional lighting can also be delivered as necessary to contribute to the aesthetics of a space.

In addition to the integrated LED lighting solutions embedded within acoustic panels, any space adjacent to the panel area can benefit from adding a wide range of system components to facilitate full room or area lighting and control solutions. The robust, low voltage class 2 power and lighting system is "touch safe" and can be easily reconfigured without any safety concerns.

Falcon Low Voltage Power and Lighting Solution offers complete control of building lighting through the SKY-Controls system of motion sensors, devices, and cloud-based software. The programmable and interactive architecture of the system provides a new standard of control and energy monitoring, helping achieve significant energy savings.

New Seating and Table Solutions

Falcon expands its portfolio of stylish, multi-functional booth seating with the introduction of the Stowe booth. Featuring Baltic birch plywood with maple face, Stowe's "egg crate" construction creates a unique, sturdy unit available in single or back to back configurations. With dimensions of 48 inches tall by 72 inches wide and the option of specifying acoustic fabrics and foam, the versatile Stowe booth can be used to create a quiet space or support a collaborative environment.

Falcon's maker tables also make their NeoCon debut. These tables were developed with flexibility and functionality in mind, making them easy to specify in virtually any location where learning, creating and working take place. The durable, flexible tables provide a comfortable, stylish, and functional place to bring creations to life.
