

## LAPSE

Introducing **Lapse**, a modular seating system created by Spanish designer Carlos Tiscar.

Lapse makes its long awaited debut at NeoCon this year as its clean, multipurpose style prepares to transform the classic concept of lounge and waiting areas for commercial and corporate environments. Lapse accounts for the various demands of modern day public seating, resulting in upholstered seats, backrests, lateral or intermediate arms and tables that can all be combined with ease to produce original configurations. The rounded base of the backrests allows for components to be joined seamlessly, whilst their flat and wide surface provides additional arm support or space for small objects.

Alongside comfort and elegance, Lapse incorporates the latest in technology with optional USB and wireless charging devices or double outlet extensions that can be fitted into any of the units. USB charging devices can also be added to backrests to deliver further versatility.

Upholstered components can be customized in a variety of graded-in fabrics, leathers or COM, complementing lacquered steel or Oak Veneer legs. The legs of Lapse are connected discretely to the unit via sleek steel inserts, creating a seemingly lightweight yet sturdy support for the seats. Tables are available in lacquered wood or Oak Veneer, with extra dimensions offered to create magazine rack features and supplementary workspace.

*Release Date: June 2017*
