Light Tape® Egress Solutions

Ensuring the safety and security of their guests is paramount at Hilton. Poorly illuminated walkways were a concern for pedestrian navigation at their Dead Sea Resort. Light Tape® was chosen by Scope MEP Design Studio of Amman, Jordan as the ideal egress solution. Light Tape® offers the perfect balance of elegance and performance, not overpowering but extremely visible.

Snap-n-Light™

Our Snap-n-Light™ is engineered to withstand the harshest saltwater environments. Potted electrical connections, encapsulated in the highest grade outdoor barrier film in the world, then inserted into a polycarbonate mounting channel delivering an IP67 rating.

Customization

It is possible to have any marking, brand or message printed directly on the Light Tape® . In this case, Hilton selected a chevron pattern to identify the direction of egress. The system has

a battery backup offering hours of illumination if
mains power is terminated.

Easy Installation

Light Tape is delivered in coils, each segment prepared for installation. Either mount using an exterior rated adhesive tape or our clip system and just snap the channel into place.
