**Dauphin introduces Lordo flex update to its successful Lordo task chair.**

**May 2017, Boonton, NJ—Dauphin, a leading provider of European designed, German engineered seating solutions for corporate and institutional markets will launch Lordo flex at NeoCon 2017.**

Building on the success of its innovative Lordo chair, Dauphin has launched Lordo flex. Developed with designer Martin Ballendat, Lordo flex features an elastic mesh fabric mounted on a height adjustable backrest. The backrest pivots at the lumbar region allowing the backrest to “flex” with the user’s movements.

Available in two mesh colors (black or silver) and two frame finishes (black or anthracite), Lordo flex is equipped standard with Dauphin’s Syncro-Quickshift Plus (QS+) mechanism. Featuring a synchronized movement which provides continuous back support, QS+ also offers a sliding seat, variable back lock and a rapid adjustment to the user’s individual body weight. All features are placed logically at the user’s finger tips for easy adjustment. Multi-adjustable armrests are offered as an option for the task chair.

A complementary 4-leg side chair and swivel tilt for conferencing applications complete this attractive and extremely comfortable seating family.
