Custom-Designed Powder Coat Line Will Increase Efficiency at OMT-Veyhl USA

HOLLAND, Mich.- The installation of a new, one-of-a-kind automated powder coat line that has been completed to improve productivity and efficiency in the OMT-Veyhl USA manufacturing unit will be ready to use starting August, 2017.

The powder coat (PC) line was custom-designed for OMT-Veyhl USA by their engineers. Every part of this PC line has been carefully engineered to reach its fullest potential of efficiency and environmental-friendliness. Energy is consistently saved or renewed while allowing for minimal waste throughout the powder coating process.

The new PC line will triple the output of painted parts per day.

One of the many advantages of the new PC line is its ability to reuse heat from the ovens to heat the facility. Not only does it reuse heat but it reuses the water from the product wash. It does this by filtering the water through special oil filters which separate the water and oil. The water can be reused in the wash and the oil will be recycled for other uses. Lastly, the new PC offers light curtains the parts pass through before entering the powder booths. These curtains inform the powder guns where the parts are on the rack. This allows the powder guns to only spray powder in that area, thus reducing the amount of powder and energy used.

OMT-Veyhl USA is a corporation founded in Germany when two companies, OMT and Veyhl, united in 2006. OMT-Veyhl USA is a top furniture supplier of height adjustable and ergonomic products. Their mission is to create safer, healthier, and more efficient work environments through ergonomic, state-of-the-art workspace components. More information about OMT-Veyhl USA, the PC line, products, and services can be found on their website <http://www.omt-veyhl.com>.
