Concertex Previews Topo Collection at NeoCon 2019 **Design Director Aaron Mensik introduces first collection with the edgy, bold brand**

Northvale, NJ. (May 2019) - The Topo collection – to be released fall 2019 – draws inspiration from the beauty held within our natural world. Concertex's Design Director, Aaron Mensik, transforms the organic contours transcribed in topographical maps into functional textiles for the contract market. Layered with depth, the collection artistically illustrates the metamorphosis of our landscape.

Marble - from the Topo collection - transforms the exquisite textures revealed beneath rock formations into a scenic and serene textile. The indoor/outdoor fabric resembles a true work of art with its large-scale repeat (27" horizontal repeat x 54" vertical). Offered in 6 sophisticated colorways, Marble is constructed with Sunbrella solution dyed acrylic and polyester yarns to allow for extreme lightfastness and durability (50,000 double rubs). The upholstery pattern has a stain resistant finish, is bleach cleanable, and eco-friendly with an ACT Facts Silver certification. Fit to lounge poolside and perfect for booth backs, Marble lends its layered beauty to any interior:

About the Company:

Technology is the foundation of Concertex's approach to product design and development. Established in 2010, the brand leads the industry in material innovation and embraces the courage to change. Today the line has expanded to include six product categories; Textiles, Coated Fabrics, Wallcovering, Wall Tiles, Outdoor, and Acoustic Solutions. Fresh and original, Concertex is dedicated to developing performance driven product that will revolutionize the hospitality, healthcare and contract markets.
