Lift designed by jehs+laub

Meet the new generation in side tables, Lift by jehs+laub. This small but mighty occasional table impresses with its fresh design, adjustable height, and wide range of applications. Whether in offices, project rooms or informal discussion areas, Lift is always at your service.

Lift is an adjustable height laptop table with the flexibility and functionality to be specified anywhere. Great for collaborative spaces, each person who uses Lift can choose the right height for their own needs and quickly and easily adjust accordingly.

Lift's easy-to-use mechanism works based on a gas cylinder for smooth, efficient height adjustment. The height adjustment mechanism is a small handle located under the table top, and a gentle pull will activate the cylinder to glide up or down. Lift ranges from 25" to 32" heights.

Lift is elegantly minimal, with a delicate style that fits any environment. Available in a variety of top finishes, Lift has an option to complement every space. The minimal design is universal, highlighted with a wide range of veneer options, along with options for a solid white acrylic top or innovative soft-touch Fenix laminates.
