### **Frasch's Stille Acoustics Premieres New Acoustical Products at Neocon.**

May 1, 2019 - Fräsch, a US based manufacturer of forward thinking workplace solutions for furniture, lighting and acoustics will showcase its expanded line of acoustical solutions by it's Stille Acoustics division at booth #7-10054 at Neocon, June 10-12<sup>th</sup> 2019, in Chicago.

Since it's introduction last year at Neocon, Stille Acoustics, has seen tremendous interest for it's acoustical products and custom fabrication for commercial interior design projects. Co-Founders Gary Nightengale and Slavka Younger have a vision for delivering to the design community solutions that are innovative and create real value through the design and impact through acoustical properties. Stille's Fella acoustical felt products are manufactured to meet the designer's specification for commercial office, healthcare and higher education markets.

After an award-winning year for the Melo Acoustical Tile Speaker in 2018, Stille is premiering an expanding range of acoustical solutions for walls, ceilings and custom applications. Stille will showcase three new products: BRIK Wall Tile System, PANL Acoustical Panel Systems and BAFL Acoustical Ceiling Baffles, which highlight the company's new range of expanded capabilities at Neocon.

## **NEW PRODUCT | BRIK**

Building on the success of its initial recycled PET felt wall tiles, Stille has developed the BRIK tile system to streamline the installation process and increase the absorption rating. “Brik is more than just a wall tile, it’s an adjustable system design to achieve a range of acoustical absorption through the panel and the mounting solution to the wall, it goes beyond a tile adhered to a wall.” stated Gary Nightengale.

Fabricated from Fella acoustical PET felt made from 55% recycle content originating from recycled water bottles. BRIK is available in 25 standard colors and thicknesses of 9mm and 12mm. The system of acoustical tiles can achieve a range of .70 - 1.00 NRC value depending on thickness and mounting solution.

## **NEW PRODUCT | PANL**

PANL is a versatile panel solution that can be integrated as partition, wall tile or suspended acoustical ceiling elements. PANL is fabricated from Fella acoustical PET felt made from 55% recycle content originating from recycled water bottles, available in various standard designs or custom patterns, 25 standard colors and thicknesses of 9mm and 12mm. As a stand alone acoustical panel can achieve a range of .50 -.90 NRC value depending on thickness. "Panl is such a simple and creative product that we can easily customize it to a designer's intent, whether the design is for a ceiling, wall or custom application, it showcases how we can customize the felt in creative ways". says Slavka Younger.

## NEW PRODUCT | BAFL

BAFL is an acoustical ceiling baffle for spaces. Designed to offer a range of acoustical baffle solutions that simplify the flexibility and ease of installation for a variety of spaces and applications. An optional lighting kit can also be specified into the baffle for applications where lighting is desired. BAFL's mounting approach enables installers and contractors ease in installing the product utilizing a range of existing hardware and fixtures (unistrut, cables, etc). BAFL is fabricated from the Fella acoustical PET felt made from 55% recycle content originating from recycled water bottles. BAFL is available in various standard or custom sizes, 25 standard colors and thicknesses of 50mm to 100mm. "Baffles have traditionally been difficult and complicated solutions, we want to bring new ideas and value through design and engineering creative solutions for ceiling applications", said Nightengale.
