

SLICE THROUGH THE NOISE

LUXXBOX BLADE ACOUSTIC PENDANT

With acoustics and lighting playing a major role in design of open-plan environments, Luxxbox is upping the ante with its latest acoustic lighting release, **Blade**.

From Luxxbox's extensive range of acoustic solutions, the **Blade** acoustic light is a sleek pendant design which incorporates LED into the 18mm slimline acoustic-rated panels, offering an NRC of 0.8. Individual pendants interconnect magnetically to form long continuous lengths, making them adaptable for any scale of space.

Luxxbox Creative and Managing Director, Jason Bird said their [acoustic lighting range](#) has evolved in response to the need for a cost-effective and aesthetically-driven solutions that address noise issues.

"There are many fixtures coming onto the market that incorporate soft fabrics into their design, but don't offer the calculable noise reduction, or provide adequate lighting output," said Bird.

Luxxbox acoustic lighting has become part of the everyday conversation in the design of major open-plan workspaces across the globe, including Amazon, Google, Bose and other large multi-national, as well as smaller scale firms who understand the benefits of using lighting to address noise concerns in their open-plan spaces.

Blade is available in four standard lengths up to 2400mm and customisable heights up to 900mm. Designed and manufactured in Australia by Luxxbox, Blade is available in many different colours. Manufactured from recycled acoustic PET, the pendants offer a minimum output of 600 lumens.
